

Identity and Access Management Services

OnWire is a U.S. Government and commercial cloud service provider for identity and access management solutions. Certified by the SBA as an 8(a) and Woman Owned Small Business, OnWire offers end-to end security solutions and services for organizations of all sizes.

OnCloud – Identity as a Service

OnCloud features a robust set of capabilities with a simplified dashboard for administration and self-service.

- Manages user access, provisioning, and single sign-on
- Securely integrates with on-premise systems
- Utilizes industry standards for interoperability

OnCloud follows US Federal Security Standards and Initiatives including:

- FedRAMP
- FISMA
- FICAM
- HSPD-12
- NSTIC

Access Management

OnCloud Access Management combines user access management and web application protection into a highly scalable user authentication, authorization and web single sign-on solution. IBM Security Access Manager for Web safeguards user access to online applications and helps protect them against advanced web threats.

Providing easier deployment and reduced operational costs, IBM Security Access Manager for Web can address key Web security and compliance needs. The single point of authentication and session management makes it easy to enable policy-driven, advanced access controls for applications.

- Provides advanced threat protection
- Protects sensitive IT assets anywhere
- Simplifies configuration options
- Provides uniform user experience
- Provides application compatibility

Identity Management

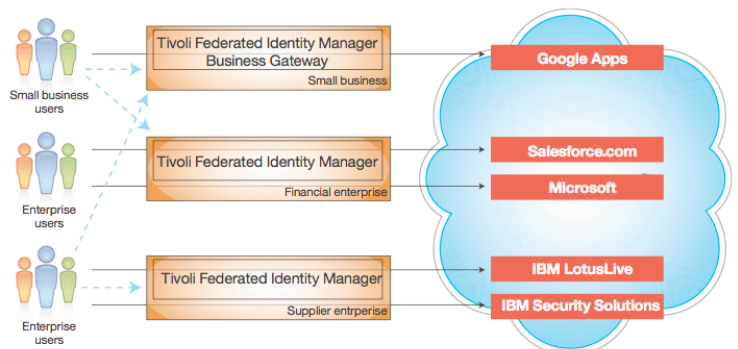

OnCloud Identity Management enables organizations drive effective identity management and governance across the enterprise. This solution helps strengthen regulatory compliance and security by reducing the risk of identity fraud. It automates the creation, modification, recertification and termination of user privileges and supports policy-based password management throughout the user lifecycle. It features a redesigned business-friendly user interface and reporting tools to help managers make better governance decisions.

- Empowers line of business managers
- Reduces complexity of enterprise identity management
- Improves user assurance
- Provides effective and actionable compliance

Federated Single Sign On

OnCloud Federated Single Sign-On provides web and federated single sign-on (SSO) to users throughout multiple applications. It uses federated SSO for security-rich information sharing for private, public and hybrid cloud deployments. Now you can enable security-rich business collaboration in the cloud.

- Helps businesses collaborate more securely
- Supports opens standards
- Delivers an identity management solution

“OnWire’s comprehensive Identity and Access Management cloud solution, OnCloud, leverages its resource’s deep IAM skills and Infrastructure technology to bring added value to IBM Security Systems Software”

IBM Security Access Manager

Provides Advanced Threat Protection

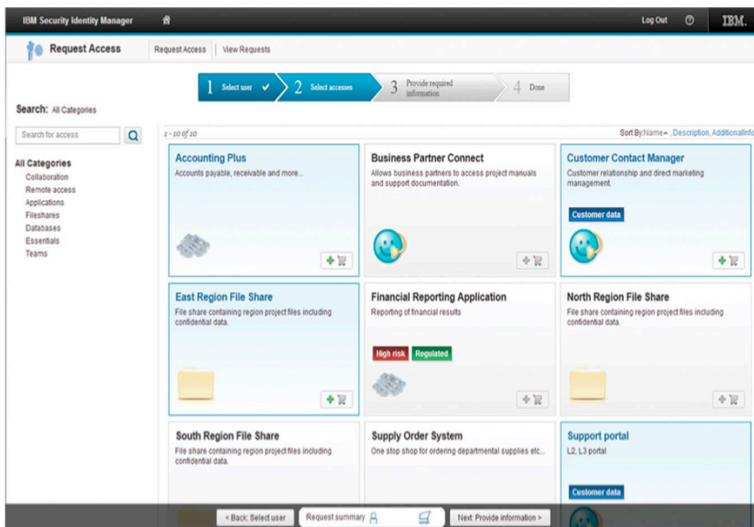

- Integrates Web single sign on and authentication, Web access management, and protection from external web threats in a single solution.

Protects Sensitive IT Assets Anywhere

- Extends user access protection to mobile and cloud environments.

Simplifies Configuration Options

- Virtual or hardware appliance form factor provide faster time to value and higher return on investment.

IBM Security Identity Manager

Empowers line of business managers

- Automates and define user access for governance, risk and compliance.
- Business focused interface helps managers make better governance decisions for employee access.

Reduces complexity of enterprise identity management
